DETAILED ACTION

Claims 8-24 are pending in this application and are being considered for examination. Applicants' amendments and arguments filed on March 01, 2007, have been fully considered and are deemed to be persuasive to overcome the rejections previously applied. Rejections and/or objections not reiterated from previous office action are hereby withdrawn.

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). This application is a 371 PCT/JP03/15542 filed on 12/04/2003 and claims the priority date of Japanese application 2002-356844 filed on 12/09/2002.

Drawings

The drawings are accepted.

EXAMINER'S AMENDMENT

An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.

An amendment to claims was sent via fax to the examiner by applicant's representative Thomas Cunningham (Reg. No. 45,394) on 03/27/07.

The application has been amended as follows:

In the Claims

Please enter the claims amendments as submitted by applicant's attorney on 03/27/07 and enclosed herein.

Allowable Subject Matter

Claims 8-24 are allowed.

The following is an examiner's statement of reasons for allowance: Following a diligent search, it was determined that the closest prior art disclosed by Leipelt et al., (JBC., 2001, Vol. 276 (36): 33621-33629) and Jorasch et al., (Eur. J. Biochem., 2000, Vol. 267: 3770-3783), wherein they have disclosed the isolation and identification glycosylceramide synthases (UDP-glucose:ceramide glucosyltransferase) from many different species ranging from plant, nematode and a variety of fungi. The prior art neither teaches nor suggests the polynucleotide with SEQ ID NO: 1 or the encoded polypeptide of SEQ ID NO: 2, glycosylceramide synthase (GCS) like protein, having the ability to enhance the temperature tolerance of acetic acid producing bacteria such as *Acetobacter* and *Gluconobacter* as claimed in claims 8-24. The utility of said polynucleotide as encoding said polypeptide with the ability to enhance the temperature tolerance of acetic acid producing bacteria, is credible based on expression in acetic acid producing bacteria and analysis of the activity of said polypeptide. Said polypeptide with the ability to enhance the temperature tolerance of acetic acid producing bacteria has real-world utility and permits the use of said polypeptide in industrial applications for the production of acetic acid.

Any comments considered necessary by applicant must be submitted no later than the payment of issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
